Image Magick ImageMagick is the venerable open-source suite of utilities that enables you to do just about any manipulation you can think of. It's also a great tool for business, as demonstrated by its use on such websites as LinkedIn.com and Flickr.com. The only problem with using ImageMagick is that it lacks the polish that professional tools provide, so you need to have a pretty good understanding of its features to make it work for you. ImageMagick for Windows, macOS, and Linux; download from `www.imagemagick.org` or try the free trial version available from the website.

Q: how to get the time and datetime in Django template i have tried this code {% if a %} {% if day %} {{ '%d days ago'|date:"%d %B %Y" }} {% else %} {{ a|date:"%d %B %Y" }} {% endif %} {% endif %} but the result is 12 September 2015 i want to get the time also i want to convert the time to timestamp i want to do this in the template. A: You're using the wrong "magic" variable. From the docs: in your template tags, if you want to have the current moment in the templating language, use the builtin 'datetime.datetime.now' function. In your case, it would be: {{ a|date:"%d %B %Y %H:%M" }} or in a "Twig" specific way: {{ a|date(format="%d %B %Y %H:%M') }} Q: Will one mesh be able to map two vertices with the same material? I have a mesh and multiple points on the mesh that represent two vertices. The faces of this mesh are arranged in a way that two points can't be interchanged using only a single face. If there is a way to map the two points (there are 6 of them) to one point using one material and with the same weight/strength on both points, is it possible? More generally, given a point on a mesh, is there a way to map all the points on the mesh to one point using a single material and with the same weight/strength on all mapped points? A: Every 3d object has a transform matrix. This matrix transforms all points in the object to a single point in space. You can operate on this matrix using trigonometry to move every point on the object to a different position. However there's a few caveats: You may need to adjust the normal if you want a consistent surface on the object. This is a cost, however, depending on the material used. Every transformed

Retention of preoperative radiotherapy in rectal cancer: the Liverpool experience. The administration of local preoperative radiotherapy to patients with rectal cancer is associated with an improved local recurrence rate and a higher sphincter-preserving resection rate. In this prospective series of 168 patients with rectal cancer, the influence of clinico-radiological factors on the ability to retain radiotherapy was analyzed. Data were obtained from a prospective series of 168 patients treated from 1980 to 1989. Post-operative follow-up ranged from 15 to 125 months (median, 66 months). Tumour differentiation (P = 0.049) and the proportion of patients with a circumferential extension greater than or equal to 3 cm into the bowel wall (P = 0.001) influenced the ability to retain local treatment. The outcome in terms of local recurrence rates and sphincter-preserving resection rates was similar in patients with well and moderately differentiated tumours whether or not they had received preoperative radiotherapy. These data suggest that the clinical risk factors of circumferential extent and differentiation are the best predictors of the ability to retain radiotherapy in patients with rectal cancer.Courtney Stodden Forced to Square Leg Call us crazy, but seeing Courtney Stodden do the Squat Leg can make us think she should become a fashion model. Although we know that the "Innocent" star will be turning 23-years-old next month, it would be only fair to give Courtney a modeling contract to show off her new curves. We would think that it would be a good idea to add Courtney to The Agency--where she could work with names such as Adriana Lima and Karlie Kloss. Stodden is currently filming "The Holly Heist" and we just hope that the next movie she is in is something along the same lines as "The Hangover".Q: Calling rest api using Angular 4 and getting results I want to call a rest api URL and get the results like the following: But I'm getting an empty searchResult Object.
